

# AI Payments Intelligence: From Data Chaos to Confident Action

The industry's first decision layer that combines automated anomaly detection with full-scale financial operations

## Business Outcomes

**Stop Revenue Leakage**

Use AI-driven anomaly detection to catch technical errors, sudden PSP outages, or BIN-level declines the moment they happen - not days later.

**Automate Financial Control**

Eliminate manual data handling. Automate reconciliation and fee intelligence to protect margins and align PSP reports with 100% precision.

**Proactive Risk Management**

Shift from reactive to proactive. Prevent disputes with pre-chargeback alerts and use AI recommendations to boost global acceptance rates.

## The Intelligence Loop

## Why Intelligence Matters

THE OLD WAY (STATIC)	THE INTELLIGENCE WAY (AI-DRIVEN)
Manual analysis across dashboards and exports	AI-guided insights surface what matters automatically
Issues discovered days or weeks later	Real-time anomaly detection flags problems as they happen
Disputes handled after chargebacks hit	Pre-dispute alerts prevent revenue loss before escalation
Fee changes explained retroactively	Fee intelligence explains cost drivers at transaction level
Siloed PSP portals and reports	One source of truth across your entire payment stack

## Key Capabilities

**AI Co-Pilot**

Transform payment data into actionable insights with AI-driven recommendations to improve acceptance rates, surface risks early, and reduce costs.

**Fee Intelligence**

Analyze interchange, scheme fees, surcharges, and penalties across all PSPs to understand true transaction costs and protect margins.

**Tailored Anomaly Detection**

Automatically detect unusual patterns, performance drops, or technical failures using custom ML models trained on your payment data.

**Automated Reconciliation**

Unify transactions and fees without spreadsheets, eliminating manual effort while ensuring accurate, audit-ready financial data.

**Don't Just Report. Decide.**

Modern payment teams don't need more data; they need better decisions. By layering AI payments intelligence over your financial operations, you transform your payment setup from a cost center into a growth engine. Detect the 'Why,' automate the 'How,' and stay in control over your payment margins.
